

Power. Protection. Intelligence.

Electrical, solar, security, fire and network systems for Kenyan buildings — designed, installed and supported by one accountable team.

WHO WE ARE

A Nairobi building-systems contractor that designs before it installs.

Kuontam Systems Limited was registered in Kenya and began operating in 2023. We design and install the systems a modern building depends on — power, automation, security, fire detection and network cabling — and we stay on to maintain them.

Every project starts with a site assessment and an engineered design, so equipment is sized to the real load and risk, not guessed. We install certified products, test everything before handover, and support our clients long after the project closes.

REGISTERED	Kuontam Systems Limited, Kenya
OPERATING SINCE	2023
BASE	Nairobi, Kenya
SYSTEMS	Power · Automation · Security · Fire · Networks
SCOPE	Design · Install · Commission · Maintain

SYSTEM INDEX

01	Solar & Electrical Power	P. 04
02	Home & Building Automation	P. 05
03	Access Control & Intelligent CCTV	P. 05
04	Fire Detection & Alarm	P. 06
05	Structured Cabling	P. 06

THE OPERATING REALITY

The grid is growing. So is the gap between supply and certainty.

8.4_{hrs}

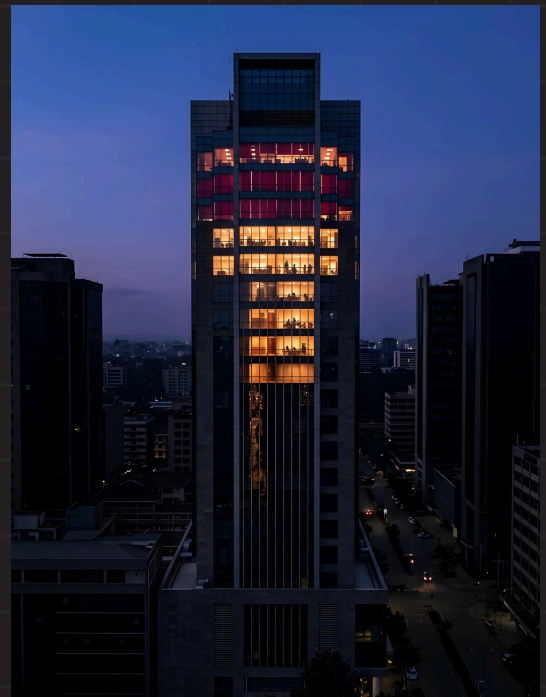

average monthly outage time per consumer in the second half of 2025 — against a 1.5-hour target.¹

For a home that means spoiled food, dead gates and cameras that go dark. For a business it means lost production, damaged equipment and expensive diesel. Security, fire detection and networks all fail with the power that feeds them.

Kuontam designs these systems together — so the solar, batteries and backup keep the cameras, alarms, access points and network running when the grid does not.

Record

electricity demand reached in late 2025, with a very thin reserve margin on the national grid.²

1 · Reported by People Daily, April 2026, citing regulator performance data for H2 2025. 2 · SolarQuarter, March 2026.

01

Solar & Electrical Power

Grid-tied, hybrid and off-grid solar sized from your real load profile — with the batteries, inverters, UPS and voltage regulation that turn unreliable supply into clean, continuous power.

GENERATION	Solar PV — grid-tied, hybrid, off-grid
STORAGE	Inverters, battery banks, DC standby systems
CONDITIONING	UPS sizing & installation, automatic voltage regulation
STANDBY	Generator supply, installation, changeover & maintenance
ELECTRICAL	Wiring, distribution boards, lighting installations

DELIVERABLES

- LOAD STUDY
- SINGLE-LINE DIAGRAM
- EQUIPMENT SCHEDULE
- TEST CERTIFICATE
- O&M HANDOVER

BEST FOR

Homes with frequent outages · Offices & retail · Schools & clinics · Light industrial sites

02

Home & Building Automation

Lighting, climate, gates, blinds and security on one app or panel — so a home or office runs the way its owners live and work, and uses less energy doing it.

CONTROL	Lighting scenes, climate, blinds
ENTRY	Gate & door automation
INTEGRATION	CCTV, access and solar monitoring on one interface
INTERFACE	Mobile app, keypads, scheduled routines

03

Access Control & Intelligent CCTV

Know who comes in, when, and where they go. Biometric, card and PIN access paired with smart video that flags what matters — instead of hours of footage nobody watches.

ACCESS	Biometric, RFID card & PIN; door and gate control
VIDEO	IP cameras with analytics; remote viewing on mobile
PERIMETER	Electric fence design, installation & maintenance
COMPLIANCE	Set-ups that support Data Protection Act, 2019 duties

04

Fire Detection & Alarm

Early warning that works when it counts. Detection and alarm systems designed around your building's layout and occupancy, installed to applicable Kenyan fire-safety requirements and serviced on schedule.

DETECTION	Smoke, heat & multi-sensor detectors
PANELS	Conventional & addressable systems
ALERTING	Call points, sounders & beacons
SERVICE	Routine testing, servicing & records

05

Structured Cabling

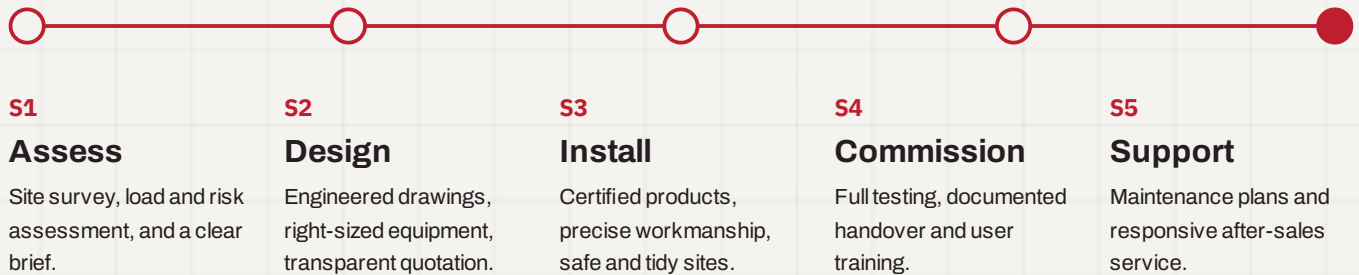

The backbone every other system runs on. Neat, labelled and tested copper and fibre networks that keep data, cameras, access and automation talking.

MEDIA	Copper (Cat6 / Cat6A) & fibre
HARDWARE	Cabinets, racks, patch panels
QUALITY	Labelling, testing & certification
HANDOVER	As-built drawings & documentation

HOW WE WORK

Five stages. One team accountable for all of them.

WHAT WE HOLD OURSELVES TO

Integrity

Honest advice and quotations — even when that means a smaller job.

Quality

Certified products, precision workmanship, everything tested before handover.

Partnership

We work alongside clients, consultants and contractors — and stay after delivery.

Efficiency

Proven project management that keeps work on time and on budget.

Tell us about the building. We'll engineer the rest.

WHAT WE DELIVER

01	Solar & Electrical Power
02	Home & Building Automation
03	Access Control & Intelligent CCTV
04	Fire Detection & Alarm
05	Structured Cabling
